ChildGuard™ is a water-based coating available in Matte, Eggshell, and Semi-Gloss finish, certified to meet or exceed the ASTM E-1795 Standard for Lead-Based Paint Encapsulants. ChildGuard has been independently tested by the American Society for Testing and Materials (ASTM) to repair lead-based paint surfaces that have been affected by renovation or other disturbances to the paint, and to prevent exposure to lead dust and lead-based paint residue. The product is categorized as a Class 1 or Category III encapsulant according to UL Wet Flake Classifications, which means there is no need for a test to verify the encasement. ChildGuard complies with all EPA and HUD requirements for lead-based paint, ensuring that it can safely be used for the protection of children and the environment. ChildGuard is a water-based coating blended specifically to form a barrier between lead-based paint and the environment. ChildGuard contains Bitrex®, a poison marker that helps prevent accidental ingestion by children. It is not tinted and may be tinted to light colors with two ounces or less of universal liquid for paint. It is suitable for use on metal, plaster, wood, and masonry surfaces. To use ChildGuard, carefully clean the surface of any debris, dust, grease, oil, mildew, glue, or any other contaminant. The coating is equal in thickness to the dry film thickness specified on the label. The coating and any contaminated diking material should be disposed of in an environmentally acceptable manner. Protect Your Kids from lead poisoning and take control of lead-based paint encasement. For technical information, call 800.342.3755. For lead assessment, contact a licensed lead inspector before using ChildGuard. The use of ChildGuard will not affect the need to remove lead-based paint from a property. For more information, refer to the Safety Data Sheet (SDS) available at www.fiberlock.com.
