FULL DOWN BY MISTING - Misting the contaminated air is an effective technique prior to post-removal air monitoring. To pull down free-floating asbestos fibers, mist the area centered in the center of the room and hold the spray gun as close to the ceiling as possible. A mist should be sprayed parallel to the ceiling in every direction or in a circle. Apply one coat to the ceiling and one coat to the walls.

To Recoat: 1-2 hours

For additional information check Safety Data Sheet (SDS) or Product Data Sheet (PDS) available online at www.fiberlock.com.

WARNING | ATTENTION

FIBERLOCK FIBERSET PM WHITE 7470
