IAQ 7000 is a durable, flexible and moisture resistant penetrating coating for duct insulation that increases airflow while minimizing dirt build up in HVAC systems. IAQ 7000 contains a fungistatic agent to resist mold growth on the dry coating surface. Manufactured from premium acrylic resins, IAQ 7000 allows for optimal durability and flexibility and can be used in residential, commercial, or industrial facilities. IAQ 7000 is acceptable for use over faced or unfaced fiberglass duct board insulation, unfaced fiberglass duct board insulation and can be used in unlined duct work. IAQ 7000 can also be used as a post-cleaning lockout of residual particulates such as, fiberglass, dust, and other inanimate material.

Successfully tested to ASTM standard C-411 “High Surface Performance of a Coating on Glass Fiber Blanket Insulation” ASTM E-84 Class A re rating. Meet's requirements of NFPA 90A/90B standard. Additionally, IAQ 7000 was tested in accordance with the procedures outlined in ASTM G 21 and received a No. 0 rating (No fungal growth, 0% growth on the test specimens).

The IAQ 7000 coating is resistant to mold only on the surface of the coating. No mold resistance claim is made other than to the coating itself. The use of any other coatings, solvents or colors in oil. The IAQ 7000 coating is resistant to mold only on the surface of the coating. No mold resistance claim is made other than to the coating itself.

Penetrating HVAC Coating
WHITE

• Penetrating coating for lined ductwork
• Lockdown for residual contamination
• Meets NFPA 90A/90B
• For use in residential, commercial or industrial facilities

Drying Time

To Touch: 1 hour
To Recoat: 8-16 hours

Surface Preparation

Wear a NIOSH approved respirator to control lead exposure. Clean up carefully with a wet mop or HEPA vacuum. Before you start, find out how to protect yourself and your family by contacting the U.S. EPA/Gead at 1-800-424-5225 or log on to www.epa.gov/lead.

Clean up all dust and loose particulate from ductwork, being careful not to damage insulation. Follow duct manufacturer's instructions for proper cleaning.

Application Tools

Appy IAQ 7000 with brush, roller or airless spray.

Product Application

Prior to application, mix thoroughly to achieve a uniform consistency. Apply IAQ 7000 to all surfaces by brush or airless spray. Application rate will vary depending on porosity of the insulation. Apply one coat by air spray, or two coats by brush. Porous surfaces may require additional coats. Ensure that surfaces are completely sealed. Circulate fresh air through the HVAC system to help dry the coating. Exhaust air outside the building IAQ 7000 can be applied using HVAC robotic spray applications (contact Fiberlock for more information).

Coverage

Smooth Surfaces: 100-200 ft²/gal
Porous Surfaces: Depends on porosity

Cleaning

Clean tools and equipments with warm soapy water before IAQ 7000 coating. And any contaminated cleaning material should be thoroughly dry and collected into drums. The drums should be sealed and labeled and land filled or incinerated according to local, regional and national regulations.

Precautions

Store in a dry place at temperatures between 40°F (4°C) and 90°F (32°C). Keep closures tight and containers upright to prevent leakage. Product is non-combustible. Stir thoroughly. Do not mix with any other coatings, solvents or colors in oil. The IAQ 7000 coating is resistant to mold only on the surface of the coating. No mold resistance claim is made other than to the coating itself. The use of any other coatings, solvents or colors in oil. The IAQ 7000 coating is resistant to mold only on the surface of the coating. No mold resistance claim is made other than to the coating itself.
