April 6, 1992

Fiberlock Technologies, Inc. Mr. Mark O'Connor 630 Putnam Ave. P. O. Box 390432 Cambridge, MA 02139

Our Reference: R13770

Dear Mr. O'Connor:

This is in regard to your fax of March 17, 1992.

In Decemeber of 1991, Surface Burning Characteristic Tests were conducted on samples of your coating with the following results:

Test No.	Flame Spread		Smoke Developed
1 2	Charles Co.	.1	3.1 0.1

Base on the above test results, the following Surface Burning Characteristics Classification would be applicable for the coating:

	Surface	Burning Char	acteristics
Flame Spread Smoke Develo		5 0	

After reviewing the test data and Follow-Up Service Procedure R13770, it is our judgement that the above Classification could be extended to your "Fiberset FT" and "Fiberset PM" products based upon the simularity of formulation to the coating tested.

However, the only evidence of Surface Burning Characteristics Classification is the appearance of the UL Classification Marking on the product.
